

Bit Shelf

Here's an easy-to-build organizer you can customize to hold as many bits and shanked accessories as you need by simply varying its length and number of holes in this handy project. Angled for better accessibility and visibility of your accessories, our shelves hold router bits, sanding drums, flap sanders, and other drill press and shanked accessories from our shop. Use either thick hardwood or 2X6 stock for the angled shelf and 3/4" stock for the backboard. We routed a 3/8" round over on all but the back edges of the shelf where shown **below**, and finished each project with a clear finish.
