

Cutting Stopped Dadoes on the Table Saw

Cutting stopped dadoes on the table saw is easy if you use this technique:

- 1)** Cut the front edge off the panel (this is the part of the panel that you don't want the dadoes to go through).
- 2)** Cut a dado or series of dadoes in the panel.
- 3)** Glue the front edge back on the panel, creating the stopped dadoes, see photo.
